ATTENTION FELLOWS & RESIDENTS: Congenital Cardiology Today Provides a Great Opportunity!

John W. Moore, MD, MPH

Share your clinical experiences or your research projects in a well-established and widely circulated pediatric and congenital cardiology-oriented publication. The staff of Congenital Cardiology Today (CCT) is well aware that trainees have significant research and educational requirements as part of the curriculum. Congenital Cardiology Today offers the unique opportunity to fast-track clinical and research projects into publications which a large part of the pediatric and congenital cardiology community will encounter. Publication in CCT can provide excellent exposure for your work and will assist you in meeting training requirements and in securing additional training opportunities and jobs!

CCT accepts interesting case reports and case series as well as reviews of clinical topics relevant to the practice of pediatric and congenital cardiologists. Such manuscripts are generally not eligible for review and publication in standard cardiology journals. Moreover, in the few journals which consider case-centered-manuscripts, there is often a prolonged delay after submission for review and publication. In addition, there is no fee for publication, including color images, in CCT. Our editorial policies encourage these submissions, and we provide

timely review and publication. On average, approximately 50% of submissions are accepted, and accepted articles are generally published within four to six months of receipt of the manuscript. Congenital Cardiology Today has found that such articles are often of considerable interest to our readership of busy practitioners.

CCT encourages you to write up the very interesting cases you encounter in training. Make sure to include some good figures, tables, etc. Send them to us for review. Also, if you have prepared a Grand Rounds or an interesting lecture for presentation in your hospital, consider writing it up and sending it for review and likely publication.

Instructions for authors are easily accessed on the website: <https://www.congenitalcardiologytoday.com/editorial>

Submit your article to Kate.f.Baldwin@gmail.com

I look forward to reviewing your submissions.

Publish

- Written by fellows, doctors and their team
- Case studies, articles, research findings, reviews and human interest
- No publication fees
- Print and electronic
- Published within 3-6 months of submission
- Fellows: turn PowerPoint decks into articles

Achieve IAC Accreditation for Your Children's Hospital

The trusted leader in accreditation for over 30 years,
offering the mark of quality your patients are searching for.

IAC is a nonprofit, nationally recognized accrediting organization, founded by medical professionals to advance appropriate utilization, standardization and quality of diagnostic imaging, interventional and therapeutic procedures.

- **Customer Service:** Facilities are busy caring for their patients and accreditation should not interfere with that. IAC clinical staff are available to guide applicant facilities through the accreditation process via phone, live chat or e-mail quickly and efficiently.
- **Quality & Safety Focused:** Offering a meaningful clinical peer review of case studies (with pathology) to evaluate diagnostic quality, report accuracy and report completeness, IAC is a partner in quality. IAC provides quality improvement-focused solutions such as the IAC QI Self-Assessment Tool, to help facilities optimize processes and improve patient safety and outcomes.
- **Continuous Improvement:** Accreditation must be thorough to truly affect the quality of care provided; however, IAC continues to explore ways to enhance the application process to make it simpler, more efficient and cost-effective to applicants including a base application fee reduction for facilities applying in 2023 and discounts on multiple site applications.

Join the more than 14,000 IAC-accredited facilities who consistently express the highest levels of satisfaction with IAC's customer service and resources. IAC offers accreditation for:

Vascular Testing
Echocardiography
Nuclear/PET
MRI • CT / Dental CT

Carotid Stenting
Cardiac Electrophysiology
Cardiovascular Catheterization
Vascular Interventional

HEART INSTITUTE

For Cardiac Conditions Great and Small, Experience and Outcomes Matter

At the Children's Hospital Colorado Heart Institute, we believe in the importance of empowering patients, families and providers with the information they need to make critical care decisions.

LARGEST

Pediatric heart program in the Rocky Mountain region

1,000+

Cardiac catheterization and electrophysiology procedures performed annually

90+

Pediatric cardiologist and advanced practice providers

675+

Heart surgeries performed annually

Our Institute, consistently ranked among the top pediatric heart teams in the country, reports outcomes data to champion transparency for our patients and families. And we're proud of what the data shows: outcomes that consistently outperform national benchmarks.

Explore our latest data:

Medtronic

Harmony™
Transcatheter Pulmonary Valve

Made for this

.....

Treating congenital heart disease patients with native or surgically repaired RVOT and severe pulmonary regurgitation takes focus. The Harmony TPV is made for this moment. It's the first FDA approved minimally invasive valve specifically designed for the native RVOT.

Learn more at [medtronic.com/madeforthis](https://www.medtronic.com/madeforthis)

Indications

The Harmony™ transcatheter pulmonary valve (TPV) system is indicated for use in the management of pediatric and adult patients with severe pulmonary regurgitation (i.e., severe pulmonary regurgitation as determined by echocardiography and/or pulmonary regurgitant fraction $\geq 30\%$ as determined by cardiac magnetic resonance imaging) who have a native or surgically-repaired right ventricular outflow tract and are clinically indicated for surgical pulmonary valve replacement.

Contraindications

The following are contraindications for the use of this device: active bacterial endocarditis or other active infections, known intolerance to Nitinol (titanium or nickel), or an anticoagulation/antiplatelet regimen.

Warnings

General: Implantation of the Harmony TPV system should be performed only by physicians who have received Harmony TPV system training. The transcatheter pulmonary valve (TPV) is to be used only in conjunction with the Harmony delivery catheter system (DCS). This procedure should only be performed where emergency pulmonary valve surgery can be performed promptly. Do not use any of the Harmony TPV system components if any of the following has occurred: it has been dropped, damaged, or mishandled in any way, or if the use-by date has elapsed.

Transcatheter pulmonary valve (TPV): This device was designed for single use only. Do not reuse, reprocess, or resterilize the TPV. Reuse, reprocessing, or resterilization may compromise the structural integrity of the device and/or create a risk of contamination of the device, which could result in patient injury, illness, or death. Do not resterilize the TPV by any method. Exposure of the device and container to irradiation, steam, ethylene oxide, or other chemical sterilants renders the device unfit for use. The device is packaged with a temperature sensor. Do not freeze the device. Do not expose the device to extreme temperatures. Do not use the device if the arrow on the sensor points to the symbol that indicates that the temperature limit has been exceeded. Do not use the device if any of the following have occurred: the tamper-evident seal is broken, the serial number tag does not match the container label, the arrow on the sensor points to the symbol that indicates that the temperature limit has been exceeded, or the device is not completely covered by the storage solution. Do not contact any of the Harmony TPV system components with cotton or cotton swabs. Do not expose any of the Harmony TPV system components to organic solvents, such as alcohol. Do not introduce air into the catheter. Do not expose the device to solutions other than the storage and rinse solutions. Do not add or apply antibiotics to the device, the storage solution, or the rinse solution. Do not allow the device to dry. Maintain tissue moisture with irrigation or immersion. Do not attempt to repair a damaged device. Do not handle the valve leaflet tissue or use forceps to manipulate the valve leaflet tissue. Do not attempt to recapture the device once deployment has begun. Do not attempt to retrieve the TPV if any one of the outflow TPV struts is protruding from the capsule. If any one of the outflow TPV struts has deployed from the capsule, the TPV must be released from the catheter before the catheter can be withdrawn. Do not attempt post-implant balloon dilatation (PID) of the TPV during the procedure, which may cause damage to or failure of the TPV leading to injury to the patient resulting in reintervention.

Delivery catheter system (DCS): This device was designed for single use only. Do not reuse, reprocess, or resterilize the DCS. Reuse, reprocessing, or resterilization may compromise the structural integrity of the device and/or create a risk of contamination of the device, which could result in patient injury, illness, or death. Do not reuse or resterilize the DCS. If resistance is met, do not advance the guidewire, DCS, or any other component without first determining the cause and taking remedial action. Do not remove the guidewire from the DCS at any time during the procedure.

Precautions

General: Clinical long-term durability has not been established for the Harmony TPV. Evaluate the TPV performance as needed during patient follow-up. The safety and effectiveness of Harmony TPV implantation in patients with pre-existing prosthetic heart valve or prosthetic ring in any position has not been demonstrated. The Harmony TPV system has not been studied in female patients of child-bearing potential with positive pregnancy.

Before use: Exposure to glutaraldehyde may cause irritation of the skin, eyes, nose, and throat. Avoid prolonged or repeated exposure to the chemical vapor. Use only with adequate ventilation. If skin contact occurs, immediately flush the affected area with water (for a minimum of 15 minutes) and seek medical attention immediately. The TPV and the glutaraldehyde storage solution are sterile. The outside of the TPV container is nonsterile and must not be placed in the sterile field. The TPV and DCS should be used only in a sterile catheterization laboratory (cath lab) environment. Ensure that sterile technique is used at all times. Strictly follow the TPV rinsing procedure. For TPV 25: Ensure that all green sutures have been removed from the attachment suture loops on the TPV before loading onto the DCS. Prevent contamination of the TPV, its storage solution, and the DCS with glove

powder. Verify the orientation of the TPV before loading it onto the DCS. The inflow end of the TPV with attachment suture loops must be loaded first. Do not place excessive pressure on the TPV during loading. Inspect the sealed DCS packaging before opening. If the seal is broken or the packaging has been damaged, sterility cannot be assured. Proper functioning of the DCS depends on its integrity. Use caution when handling the DCS. Damage may result from kinking, stretching, or forceful wiping of the DCS. This DCS is not recommended to be used for pressure measurement or delivery of fluids. Carefully flush the DCS and maintain tight DCS connections to avoid the introduction of air bubbles.

During use: The TPV segment is rigid and may make navigation through vessels difficult. Do not advance any portion of the DCS under resistance. Identify the cause of resistance using fluoroscopy and take appropriate action to remedy the problem before continuing to advance the DCS. Careful management of the guidewire is recommended to avoid dislodgement of the TPV during DCS removal. Once deployment is initiated, retrieval of the TPV from the patient is not recommended. Retrieval of a partially deployed valve may cause mechanical failure of the delivery catheter system or may cause injury to the patient. Refer to the section below for a list of potential adverse events associated with Harmony TPV implantation. During deployment, the DCS can be advanced or withdrawn prior to the outflow struts protruding from the capsule. Once the TPV struts contact the anatomy during deployment, it is not recommended to reposition the device. Advancing the catheter forward once the TPV struts make contact with the anatomy may lead to an undesired deployment or may cause damage to or failure of the TPV and injury to the patient. Refer to the section below for a list of potential adverse events associated with the Harmony TPV implantation. Physicians should use judgment when considering repositioning of the TPV (for example, using a snare or forceps) once deployment is complete. Repositioning the bioprosthesis is not recommended, except in cases where imminent serious harm or death is possible (for example, occlusion of the main, left, or right pulmonary artery). Repositioning of a deployed valve may cause damage to or failure of the TPV and injury to the patient. Refer to the section below for a list of potential adverse events associated with the Harmony TPV implantation. Ensure the capsule is closed before DCS removal. If increased resistance is encountered when removing the DCS through the introducer sheath, do not force passage. Increased resistance may indicate a problem and forced passage may result in damage to the device and harm to the patient. If the cause of resistance cannot be determined or corrected, remove the DCS and introducer sheath as a single unit over the guidewire, and inspect the DCS and confirm that it is complete. If there is a risk of coronary artery compression, assess the risk and take the necessary precautions. Endocarditis is a potential adverse event associated with all bioprosthetic valves. Patients should make their healthcare providers aware that they have a bioprosthetic valve before any procedure. Post-procedure, administer appropriate antibiotic prophylaxis as needed for patients at risk for prosthetic valve infection and endocarditis. Prophylactic antibiotic therapy is recommended for patients receiving a TPV before undergoing dental procedures. Post-procedure, administer anticoagulation and/or antiplatelet therapy per physician/clinical judgment and/or institutional protocol. Excessive contrast media may cause renal failure. Preprocedure, measure the patient's creatinine level. During the procedure, monitor contrast media usage. Conduct the procedure under fluoroscopy. Fluoroscopic procedures are associated with the risk of radiation damage to the skin, which may be painful, disfiguring, and long term.

Potential Adverse Events

Potential risks associated with the implantation of the Harmony TPV may include, but are not limited to, the following: • death • valve dysfunction • tissue deterioration • hematoma • heart failure • cerebrovascular incident • perforation • rupture of the right ventricular outflow tract (RVOT) • compression of the aortic root • compression of the coronary arteries • sepsis • pseudoaneurysm • erosion • stent fracture • arrhythmias • device embolization or migration • pulmonary embolism • occlusion of a pulmonary artery • laceration or rupture of blood vessels • device misorientation or misplacement • valve deterioration • regurgitation through an incompetent valve • physical or chemical implant deterioration • paravalvular leak • valve dysfunction leading to hemodynamic compromise • residual or increasing transvalvular gradients • progressive stenosis and obstruction of the implant • hemorrhage • endocarditis • thromboembolism • thrombosis • thrombus • intrinsic and extrinsic calcification • bleeding • bleeding diathesis due to anticoagulant use • fever • pain at the catheterization site • allergic reaction to contrast agents • infection • progressive pulmonary hypertension • progressive neointimal thickening and peeling • leaflet thickening • hemolysis. General surgical risks applicable to transcatheter pulmonary valve implantation: • abnormal lab values (including electrolyte imbalance and elevated creatinine) • allergic reaction to antiplatelet agents, contrast medium, or anesthesia • exposure to radiation through fluoroscopy and angiography • permanent disability.

Please reference the Harmony TPV system instructions for use for more information regarding indications, warnings, precautions, and potential adverse events.

CAUTION: Federal law (USA) restricts these devices to the sale by or on the order of a physician.

NO ONE ELSE GETS THE TIMMY TREATMENT

He's one of 31,492 kids who received individualized care at the Children's Hospital Colorado Heart Institute last year. How individualized? We handpicked a team of pediatric specialists just for Timmy and his unique diagnosis:

- 1 CARDIOLOGIST
- 1 SURGEON
- 1 ELECTROPHYSIOLOGIST
- 1 CARDIAC ANESTHESIOLOGIST
- 3 NURSE PRACTITIONERS
- 1 CLINICAL PSYCHOLOGIST
- 1 RESPIRATORY THERAPIST
- 1 PHYSICAL THERAPIST
- 2 CHILD LIFE SPECIALISTS
- 1 MEDICAL DOG NAMED SALIDA
